

Project: Instagram Clone

Database Analysis

Author - Akash Prasad Sah

Introduction

- In this project, we will be analyzing the Instagram Clone database ('ig_clone') to extract valuable insights
- And answer specific questions related to user activity, content engagement, and more.
- Our goal is to provide meaningful data-driven recommendations to support decision-making for marketing, user engagement, and overall platform improvement.

'ig_clone' Database Schema

Key Tables

1. Users Table:

- Fields: `id` (Primary Key), `username` (Unique), `created_at` (Timestamp).
- Stores user information with a unique username and creation timestamp.

2. Photos Table:

- Fields: `id` (Primary Key), `image_url`, `user_id` (Foreign Key), `created_at` (Timestamp).
- Stores information about user-uploaded photos with image URL, linked to the Users table.

3. Comments Table:

- Fields: `id` (Primary Key), `comment_text`, `photo_id` (Foreign Key), `user_id` (Foreign Key), `created_at` (Timestamp).
- Stores user comments on photos, linked to both Users and Photos tables.

4. Likes Table:

- Fields: `user_id` (Foreign Key), `photo_id` (Foreign Key), `created_at` (Timestamp).
- Records likes on photos, with a composite primary key linking Users and Photos tables.

5. Follows Table:

- Fields: `follower_id` (Foreign Key), `followee_id` (Foreign Key), `created_at` (Timestamp).
- Represents user follow relationships, with a composite primary key linking Users table.

6. Tags Table:

- Fields: `id` (Primary Key), `tag_name` (Unique), `created_at` (Timestamp).
- Stores unique tags for categorizing photos.

7. Photo_Tags Table:

- Fields: `photo_id` (Foreign Key), `tag_id` (Foreign Key).
- Connects photos with associated tags, forming a composite primary key.

SQL Queries for Instagram Clone Database

Queries

1. Create an ER diagram or draw a schema for the given database.
2. Find the 5 oldest users.
3. Identify the day of the week most users register on.
4. Target inactive users in an ad campaign.
5. Determine the winner of a photo likes contest.
6. Calculate the average number of posts per user.
7. Find the top 5 most used hashtags.
8. Identify users who liked every photo on the site.
9. Discover users who have never commented on a photo.
10. Find users who have never commented on any photo or have commented on every photo.
11. Demonstrate the top 30 usernames to the company who have posted photos in the range of 3 to 5.
12. Can you help me find the users whose name starts with c and ends with any number and have posted the photos as well as liked the photos?
13. Find the users who have created Instagram id in May and select top 5 newest Joines from it?

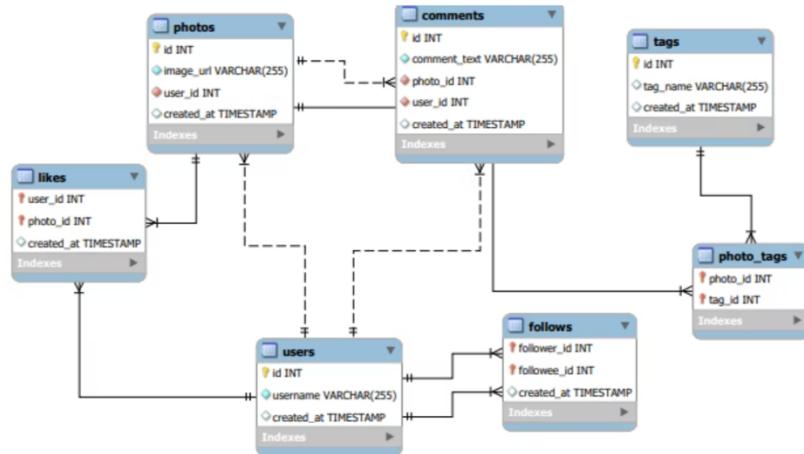

Q.1) ER Diagram for ig_clone Database

Entities:

- Users: Registered users of the app with profile information.
- Photos: Images uploaded by users with associated metadata.
- Tags: Keywords assigned to photos for categorization and organization.
- Follows: User-to-user relationships indicating who follows whom.
- Likes: User-to-photo relationships indicating user preferences.

Relationships:

- One-to-One Relationship: Each user has one profile photo, and each photo belongs to one user.
- One-to-Many Relationship: A user uploads multiple photos, but each photo belongs to only one user.
- Many-to-Many Relationship: A photo has multiple tags, and a tag can be applied to multiple photos.
- One-to-Many Relationship: A user follows multiple users, but each user can only be followed by other users.
- Many-to-Many Relationship: A user likes multiple photos, and a photo can be liked by multiple users.

Q.2) We want to reward the user who has been around the longest, Find the 5 oldest users.

Code:

```

SELECT *
FROM users
ORDER BY created_at ASC
LIMIT 5;
    
```

Insights:

Recognizing and rewarding long-time users is crucial for user retention. These users have been a part of the platform since its early days, showcasing loyalty and engagement.

Result Grid | Filter Rows: | Edit: 

	id	username	created_at
▶	80	Darby_Herzog	2016-05-06 00:14:21
	67	Emilio_Bernier52	2016-05-06 13:04:30
	63	Elenor88	2016-05-08 01:30:41
	95	Nicole71	2016-05-09 17:30:22
	38	Jordyn.Jacobson2	2016-05-14 07:56:26
*	NULL	NULL	NULL

users 1 ×

Output ::::::::::::::::::::

Action Output

#	Time	Action
18	23:36:35	use ig_clone
19	23:36:42	select * from users order by created_at asc limit 5

Q.3) To understand when to run the ad campaign, figure out the day of the week most users register on?

Code:

```
SELECT DAYNAME(created_at) AS Day_Name,
COUNT(*) AS Day_count
FROM users
GROUP BY Day_Name
LIMIT 2;
```

Insights:

Knowing the days of the week when most users register is valuable for planning targeted ad campaigns. This data can

help optimize ad placement and timing to reach a larger audience.

The screenshot shows a database query results interface. At the top, there's a toolbar with 'Result Grid' (selected), 'Filter Rows' (with a search bar), 'Export' (with icons for CSV, Excel, PDF), 'Wrap Cell Content' (with a preview icon), and 'Fetch rows'. Below the toolbar is a table titled 'Result 9' with two rows:

	Day_Name	Day_count
▶	Thursday	16
	Sunday	16

Below the table is a section titled 'Output' with a dropdown menu set to 'Action Output'. It shows a log entry:

#	Time	Action
26	00:30:48	select pt.tag_id, t.tag_name, count(pt.tag_id) as tag_used_count from tags t join photo_tags ..

Q.4) To target inactive users in an email ad campaign, find the users who have never posted a photo?

Code:

```
Select * FROM users WHERE id  
NOT IN(Select distinct user_id from photos);
```

Insights:

Identifying users who have never posted a photo allows for targeted email ad campaigns to re-engage and encourage them to contribute content, enhancing overall platform activity.

Result Grid | Filter Rows: | Edit: | Export

	id	username	created_at
▶	5	Aniya_Hackett	2016-12-07 01:04:39
	7	Kassandra_Homenick	2016-12-12 06:50:08

	21	Rocio33	2017-01-23 11:51:15
	24	Maxwell.Halvorson	2017-04-18 02:32:44
	25	Tierra.Trantow	2016-10-03 12:49:21

users 3 ×

Output ::::::::::::::::::::

Action Output

	#	Time	Action
<input checked="" type="checkbox"/>	20	23:42:46	select * from users where id not in(select distinct user_id from photos)

Q.5) Suppose you are running a contest to find out who got the most likes on a photo. Find out who won?

Code:

```
select u.username, p.id as photo_id, pl.like_count from users u
join photos p on u.id = p.user_id
join (select photo_id, count(*) like_count from likes group by
photo_id) as pl on p.id = pl.photo_id order by like_count desc
limit 1;
```

Insights:

Running contests based on likes fosters engagement. Recognizing users with the most likes not only boosts their profile but also encourages healthy competition and interaction on the platform.

Result Grid			
	username	photo_id	like_count
▶	Zack_Kemmer93	145	48

Result 5		
Output		
Action Output		
#	Time	Action
22	23:55:44	select u.username,p.id as photo_id, pl.like_count from users u join photos p on u.id = p.user_id;

Q.6) The investors want to know how many times does the average user post.

Code:

```
With avg_post as (select user_id, count(*) as cc from
photos group by user_id)
select round(avg(cc)) as avg_user_post from avg_post;
```

Insights:

Investors seeking information on user activity find the average post frequency valuable. This metric indicates how

actively users are contributing content, impacting the overall vibrancy of the platform.

avg_user_post
3

Result 7		
Output		
#	Time	Action
24	00:02:06	with avg_post as (select user_id, count(*) as cc from photos group by user_id) select round(av...

Q.7) A brand wants to know which hashtag to use on a post and find the top 5 most used hashtags.

Code:

```
select pt.tag_id, t.tag_name, count(pt.tag_id) as tag_used_count
from tags t
join photo_tags pt on t.id = pt.tag_id group by pt.tag_id,
t.tag_name, pt.tag_id order by
tag_used_count desc, tag_name asc limit 5;
```

Insights:

For brand strategy, understanding the most used hashtags

provides insights into popular trends and user interests. Brands can leverage these hashtags to maximize the visibility of their content.

The screenshot shows a MySQL Workbench interface. At the top, there's a toolbar with 'Result Grid' (selected), 'Filter Rows', 'Export' (with icons for CSV, Excel, PDF, etc.), 'Wrap Cell Content', and 'Fetch rows'. Below the toolbar is a result grid titled 'tag_usage' with columns: tag_id, tag_name, and tag_used_count. The data is as follows:

	tag_id	tag_name	tag_used_count
▶	21	smile	59
	20	beach	42
	17	party	39
	13	fun	38
	18	concert	24

Below the grid is a 'Result 8' tab and an 'Output' section. The output section has a dropdown menu set to 'Action Output' and a table with columns '#', 'Time', and 'Action'. One entry is visible:

#	Time	Action
25	00:26:38	with avg_post as (select user_id, count(*) as cc from photos group by user_id) select round(av...

Q.8) To find out if there are bots, find users who have liked every single photo on the site.

Code:

```
With user_liked as(select user_id, count(*) as user_liked_count  
from likes group by user_id),  
photos_id as (select count(distinct photo_id) as  
photo_id_count from likes)  
select ul.user_id, u.username, user_liked_count from users u  
join user_liked ul on u.id = ul.user_id  
where ul.user_liked_count = (select photo_id_count from  
photos_id);
```

Insights:

Identifying users who have liked every single photo raises

awareness about potential bot activity. This information is crucial for maintaining the integrity and authenticity of user engagement on the platform.

The screenshot shows a database interface with a result grid and an action output log. The result grid displays six rows of data with columns: user_id, username, and user_liked_count. The action output log shows one entry with a checkmark, indicating a successful execution of a query.

	user_id	username	user_liked_count
▶	5	Aniya_Hackett	257
	14	Jadyn81	257
	21	Rocio33	257
	24	Maxwell.Halvorson	257
	36	Ollie_Ledner37	257
	41	Mckenna17	257

Result 11 ×

Output ::

Action Output

#	Time	Action
28	00:38:40	with user_liked as(select user_id, count(*) as user_liked_count from likes group by user_id), p...

Q.9) To know who the celebrities are, find users who have never commented on a photo.

Code:

```
SELECT *FROM users LEFT JOIN comments ON  
users.id = comments.user_id WHERE comments.id IS  
NULL;
```

Insights:

Celebrities often have a significant following but may not actively comment. Recognizing users who have never commented helps identify potential celebrities or influencers on the platform.

	<u>id</u>	<u>username</u>	<u>created_at</u>	<u>id</u>	<u>comment_text</u>	<u>photo_id</u>	<u>user_id</u>	<u>created_at</u>

	77	Donald.Fritsch	2017-01-07 10:05:41	NULL	NULL	NULL	NULL	NULL
	80	Darby_Herzog	2016-05-06 00:14:21	NULL	NULL	NULL	NULL	NULL

Result 4 ×

Q.10) Now it's time to find both of them together, find the users who have never commented on any photo or have commented on every photo.

Code:

```
SELECT *FROM users LEFT JOIN comments ON users.id = comments.user_id WHERE comments.id IS NULL UNION ALL SELECT *FROM users LEFT JOIN comments ON users.id = comments.user_id;
```

Insights:

Combining users who have never commented with those who

have commented on every photo provides a nuanced understanding of user engagement patterns. It allows for targeted communication strategies.

Result Grid			Filter Rows:	Export:		Wrap Cell Content:		
	id	username	created_at	id	comment_text	photo_id	user_id	created_at

Result 22 ×

Output ::::

Q.11) Demonstrate the top 30 usernames to the company who have posted photos in the range of 3 to 5.

Code:

```
select u.username, count(user_id) as post_count from
photos p join users u on p.user_id = u.id group by user_id
having post_count between 3 and 5
order by post_count desc limit 30;
```

Insights:

The query identifies users posting 3 to 5 photos, emphasizing

their diverse contributions for community building. Visual aids enhance engagement metrics, contributing to a healthier platform. Insights also guide user recognition initiatives, fostering a more inclusive community.

	username	post_count
▶	Adelle96	5

Q.12) Can you help me find the users whose name starts with c and ends with any number and have posted the photos as well as liked the photos?

Code:

```
SELECT DISTINCT username, users.id FROM users JOIN
photos ON photos.user_id = users.id JOIN likes ON
likes.photo_id = photos.id WHERE username REGEXP '^c'
AND username REGEXP '[0-9]$';
```

Insights:

Identify users with names starting with 'c' and ending with a number who have both posted photos and liked others' photos. This query helps pinpoint engaged users with specific username patterns, providing insights for targeted engagement strategies or user recognition program.

username	id
Cesar93	59
Clint27	88
Colten.Harris76	78

Output :-----

Action Output

#	Time	Action
73	01:15:01	SELECT DISTINCT username, users.id FROM users JOIN photos ON photos.user_id = users.id WHERE username LIKE 'c%' AND username REGEXP '[0-9]\$' AND users.id IN (SELECT user_id FROM likes);

Q.13) Find the users who have created instagramid in may and select top 5 newest joinees from it?

Code:

```
select * from users where month(created_at) = 5 order by created_at desc limit 5;
```

Insights:

Identify users who joined in May, emphasizing the top 5 newest members. Showcase growth trends, highlight platform

appeal in specific months, and consider targeted onboarding or engagement strategies for May joiners.

The screenshot shows the MySQL Workbench interface. At the top, there's a toolbar with icons for Result Grid, Filter Rows, Edit, and Export/Import. Below the toolbar is a result grid titled 'Result Grid' showing data from a 'users' table. The columns are 'id', 'username', and 'created_at'. The data includes rows for users with IDs 11, 58, 40, 71, and 38, along with some null entries. Below the grid, it says 'users 50'. Underneath the grid is an 'Output' section with an 'Action Output' dropdown. A table shows the history of actions, with one entry checked: '# 76 01:20:52 select * from users where month(created_at) = 5 order by created_at desc limit 5'.

	id	username	created_at
